Manufacturer of wireless
and corded shutdown
switches for engines and
motors.

Model 200 for use
on gas or diesel engines.

Maybe you have lots of employees or, perhaps, you work by yourself... what happens if you're entangled in a piece of equipment? How long would it take for other employees to help? Can you free yourself?

When I got caught in a piece of equipment on our farm, I had a few seconds to reach for my transmitter. If I had not had it, my story would have a very different ending.

-Ted Lacy
Founder & CEO, Red Fox, Inc

"The Fox-Paws safety system gives us peace of mind. Whenever one of our employees is working alone, even 10 yards away from help. one second could save a limb, or a life. With Fox-Paws, they can instantly shut down machinery and equipment. We would much rather notify authorities and family that there has not be a tragic accident, but he's OK, thanks to his personal Fox safety cutoff unit. An investment that truly is PRICELESS."

-JoAnn & Wayne Drake
Rosalia Feed & Grain | Rosalia Feed Service

Model 225 for use
on gas or diesel engines.

Transmitters can be made
water resistant for use on tugs
and fishing boats.
